

Stainless Steel Bird Spikes

Sick of the unsightly mess and constant damage birds are doing to your property when trying to roost and nest around your buildings and window ledges? Sick of the mess they leave on your new or freshly painted roof, under television aerials, on your house and vehicles? Sick of the mess they leave on your business signage?

Our range of bird deterrent products are the solution for protecting your property, whether residential or industrial, in a wide range of situations against birds, including seagulls, pigeons, starlings, swallows and sparrows, without hurting them.

Spikes are simply glued or attached to any roof ridge, window, pipe, ledge, sign, light or aerial where birds sit. The dense pattern of protruding spikes make it impossible for birds to land moving them elsewhere without hurting them.

This solution to your bird problem is quick, instant, permanent and requires no up-keep or maintenance.

Both the stainless steel and plastic spike system are virtually invisible once installed and provide 'the ultimate bird deterrent.'

Our bird spikes and other range of bird deterrent products are now being used successfully by dairy farmers to help deter birds and nesting birds in and around their dairy sheds and meal feeding systems. This helps stop bird infestations that can result in decreased milk production and the spread of disease within herds.

We recognise that each dairy shed has its own unique problems and we are able to assist offering ideas and products that are suited for specific problem areas and situations. So act today because the longer birds are a problem the harder it is to get rid of them.

Stainless Steel and Polycarbonate Bird Spikes

DET8SS

DET4SS

DET8PS

DET4PS

DETCPS

DETSSS

DETSPAD

- ◆ Available in various sizes and materials to suit all purposes, with regular snaplines to suit any length.
- ◆ The stainless steel spikes are heavy duty 1.4mm diameter 304 grade stainless steel and the length of each pin is 122mm.
- ◆ The spikes are cut flat at the tip to prevent injury to both installers and birds.
- ◆ The length of each strip is approximately 330mm and flexible for using on curves.
- ◆ The 4mm thick product bases and polycarbonate spikes are made from UV light stabilised resistant polycarbonate.
- ◆ With 20 protruding wires and 4 different angles, DET8SS is the most commonly used spike available; a single row of spikes can be used on ledges and ridgelines with a width up to and over 200mm (8 inches).
- ◆ Along the base of the spike are 9 breakable sections that can be simply snapped apart with your fingers.
- ◆ The DETCPS takes 10 seconds to install with no tools and does not need to be removed for annual chimney sweeping.
- ◆ With an incredible 240 wires per strip DETSSS works well for small birds, as well as seagulls and pigeons.
- ◆ DETSPAD is formulated to attach spike to brick, timber, lead, glass, concrete, steel, plastic and most other surfaces.
